Module assessment

3 minutes

Module assessment passed

Great job! You passed the module assessment.

Score: 100%

Check your knowledge

1. What is the key advantage of using Azure Content Understanding over basic Optical Character Recognition (OCR)?

- Azure Content Understanding extracts text faster by skipping image preprocessing.
- Azure Content Understanding understands document structure and maps extracted data to a defined schema. ✓ Correct
- Azure Content Understanding extracts structured data, while OCR extracts the relationship between words in text.

2. What is the primary role of an analyzer in Azure Content Understanding?

- It defines how content is processed and what structured data is returned. ✓ Correct
- It stores extracted data in a database.
- It converts JSON output into human-readable text.

3. When you use the Azure Content Understanding Python SDK, what happens after you submit content for analysis?

- The results are returned immediately in the same request.
- The analyzer retrains itself on the submitted content.
- You must poll a URL until the analysis job completes. ✓ Correct
